In Use

GRAMMAR IN USE draws on the science of how people learn, the best practices of English language teaching, and the everyday realities of classrooms. The result is a learner-centered series that brings together precision, creativity and purpose.

What makes GRAMMAR IN USE different?

- ◆ **STRUCTURED PROGRESSION:** From warm-ups to conceptual notes to comprehensive exercises, each lesson is carefully scaffolded so that learners move confidently from recognition to independent use.
- ◆ **ACTIVE ENGAGEMENT:** Grammar games and activities transform rules into hands-on tasks, making learning playful, interactive and enriching.
- ◆ **INTEGRATED SKILLS:** With listening, speaking, comprehension and guided writing, learners strengthen fluency across all four skills, not just grammar in isolation.
- ◆ **CROSS-DISCIPLINARY CONNECTIONS:** Exercises draw on science, history and everyday contexts, showing learners how grammar shapes understanding across subjects.
- ◆ **COGNITIVE REINFORCEMENT:** Features like Word Watch and Grammar Tip target common confusions, supporting recall and building lasting accuracy.
- ◆ **HOLISTIC LEARNING:** Values, life skills and mindfulness tasks connect grammar to collaboration, empathy and responsibility, to make language learning meaningful beyond the classroom.

Rocket maths

The orange has numbers at the corners shown as in the circle. Find the correct number. The number in each circle is the sum of the pair of corner numbers. Find the correct number. We can show the sum as each circle like this:

Each circle with opposite the two corner sides of that circle. If you add the other numbers in either the left-hand side and right-hand side, you will get 10. In the next two circles, we will show the same sum (10) in two different ways.

10 = 3 + 7 10 = 4 + 6 10 = 5 + 5

10 = 2 + 8 10 = 1 + 9 10 = 0 + 10

P 51

Rocket maths to develop skills of solving puzzles, doing quick calculations (**mental maths**) and doing tricky sums

The Russian city of Suzdal had seven bridges. These joined two river islands to each other and to the banks of the river. A mathematician named Lomonosov asked if a person could walk over each bridge exactly once and come back to the starting place. Euler proved that this was not possible because the islands and the banks had an odd number of bridges.
